Vulcan Launches New IT Advisory Service

Today's business environment is challenging. Organisations across the globe are constantly looking for new ways to create sustainable competitive advantage and increase productivity. One of the most readily available and cost effective ways to achieve this is to maximise the business value of your Information Technology.

Vulcan Solutions has launched a new specialised IT advisory service aimed at enhancing the competitiveness of Ireland's most progressive businesses and organisations. Through the provision of practical business and technical advice, our service is designed to help companies identify IT investments that

will their competitiveness and increase their productivity. Our team of multi-disciplined advisors will ensure that businesses find the solutions that meet their requirements and budget.

Commenting on the recent launch of this initiative, Cian McNamara, General Manager, Vulcan Solutions, said *"In today's environment, every company needs to focus on being as competitive as possible. The appropriate IT investment can improve the competitiveness of any company or organization, but many companies struggle to identify the best investment to make, and some lack the experience to successfully manage IT and software implementation projects. That's where we can help, by giving your company access to external IT expertise, delivered in a pragmatic way, by highly experienced IT professionals"*.

Our service provides organisations across all sectors with a comprehensive range of practical advisory services; Formulation & Implementation of IT Strategy, Development of Business Case for IT Investment, Solution Design & Business Analysis, System & Vendor Selection, System Implementation, Change Management, and IT Outsourcing.

Creating competitive advantage through IT optimisation is not a new challenge for us. From our headquarters in the West of Ireland, we have been helping Ireland's business community to achieve this for almost 20 years.
